Use Of Clevite, Perfect Circle, Victor Reinz and Beck/Arnley Products In Aircraft Or Other Specialty Equipment May Be A Violation Of Local, State or Federal Regulatory Agency Laws, Rules And Regulations.

These products are intended solely for automotive applications. Under absolutely NO circumstances should these products ever be used in non-automotive applications including, without limitation, aircraft engines, medical equipment, atomic energy devices or reactors.

"Federal, State and local laws restrict the removal, rendering inoperative, or in some cases the modification of factory installed emission devices or systems. California restricts the use of parts which could increase emissions in vehicles designed for use on public streets or highways. The sale or installation on emission controlled vehicles of certain emission control components not approved by the California Air Resources Board, which alter or modify the original design or performance of such vehicle's emission control system is prohibited. Some of the parts listed and offered for sale in this catalog may fall within the above restrictions. Such parts are intended only for use on off-road vehicles competing in competitive events or on other types of vehicles which are exempt from the applicable emission control laws. Installation of these parts on vehicles subject to emission control laws may be prohibited. Dana recommends that the applicable emission control laws be reviewed before considering the installation of add-on or modified parts."

How To Use This Gasket Parts Catalog

The Master Gasket Catalog is divided into two main application sections: Passenger Car and Light Truck. Each section is easily located by using the shaded tab areas found on the edge of each catalog page.

Listings are arranged by liter size in ascending order in the main gasket and miscellaneous gasket sections.

Select the appropriate model from the model index and locate the applicable engine. Proceed to the applicable engine in the engine index, which precedes each vehicle listing. Refer to the block shown for that engine, check the "Engine Heading" and select the part by name, the applicable year, the model and then the part number.

VIN CODES

With this catalog you will find late model vehicle identification code listing (VIN Codes) with each catalog listing. These VIN codes will be helpful in identifying late model engines. The VIN codes may be easily identified from the vehicle identification plate located on the dashboard and may be viewed through the windshield on the driver's side of the vehicle.

Each engine listing is divided into the following:

Main Gasket Section

- Includes major gasket sets and related items
Arranged by popularity
 - Head Set
 - Lower Set
 - Full Set
 - Engine Kit Gasket Set
 - Etc.

Miscellaneous Gasket Section

- Includes all engine gaskets and seals not listed in main section
Arranged in alphabetical order
 - Air Cleaner Gasket
 - Carburetor Mounting Gasket
 - Distributor Mounting Gasket
 - Etc.

Chassis related gaskets are located at the back of both the passenger car section and light truck section. They are easily identifiable by the shaded tab areas at the bottom outside edge of each catalog page. These gaskets are listed first by model name and second by product name.

Axle Shaft Gaskets

Arranged by make and model name

Differential Housing Covers Gaskets

Arranged by make and model name

- Axle Housing Cover Gaskets and Differential Carrier Gaskets

Transmission Gaskets

- Includes all transmission gaskets arranged by make and model name
 - Electric Shift Cover Gaskets
 - Power Take Off Cover Gasket
 - Transmission Gasket Set
 - Etc.

Material type is shown to assist part selection.

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

Chrysler 5.2L and 5.9L Front Timing Cover Gasket

Issue:

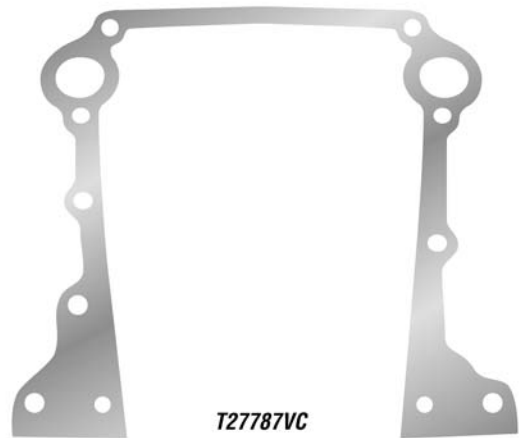

The front timing cover gasket on 1957 to 1989 Chrysler 5.2L (318 CID) engines and 1971 to 1980 Chrysler 5.9L (360 CID) engines has a tendency to tear because of the motion caused by the aluminum timing cover as it moves against the cast iron block. Once the gasket tears, coolant will leak from the engine, causing overheating and possible premature engine failure.

Resolution:

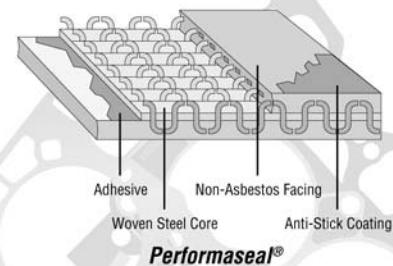

Victor Reinz offers a Performaseal® replacement gasket for these engines. The Performaseal gaskets are comprised of a woven, perforated steel core secured to a composition facing with an anti-stick coating. The facing resists oil, gasoline, anti-freeze, and other corrosives. Additionally, these gaskets provide a superior seal for irregular surfaces, minimal torque loss for a consistent load, and excellent radial strength to resist scrubbing and fretting caused by thermal expansion.

Application:

Victor Reinz part number T27787VC is available for 1957 to 1989 Chrysler 5.2L (318 CID) and 1971 to 1980 5.9L (360 CID) engines.

T27787VC

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

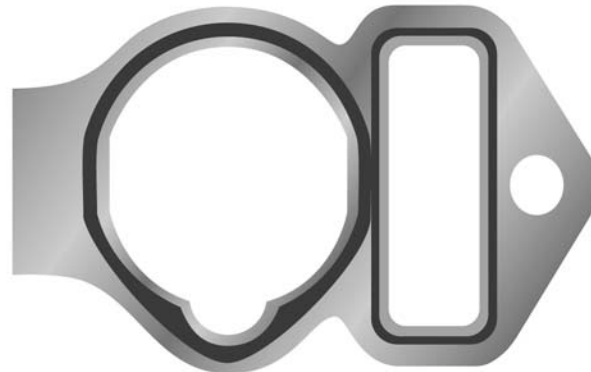

Chrysler (Mitsubishi) 3.0L Intake Manifold Gaskets

Issue:

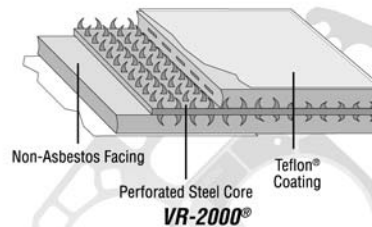

Some Chrysler and Mitsubishi vehicles with 3.0L engines tend to develop coolant leaks in the lifter valley of the intake manifold gasket. These leaks occur because of the thermal expansion and contraction of the block and cylinder head during engine operation.

Resolution:

Victor Reinz has engineered an intake manifold gasket from VR-2000® material that uses mechanical beads in the material to eliminate the coolant leaks. Other gasket brands fail to take into consideration the motion or limited bolt load of the engine hardware, resulting in coolant leakage from the coolant opening after a few thermocycles. The Victor Reinz brand gasket features a perforated steel core clinched to its facing that seals with the limited load and recovers from the hardware's crushing effects. The gasket's design and Teflon® coating extend the life of the gasket, resulting in proven reliability.

MS15444

VR-2000®

Application:

Victor Reinz part number MS15444 is available for 1988 to 2000 Chrysler and Mitsubishi engines.

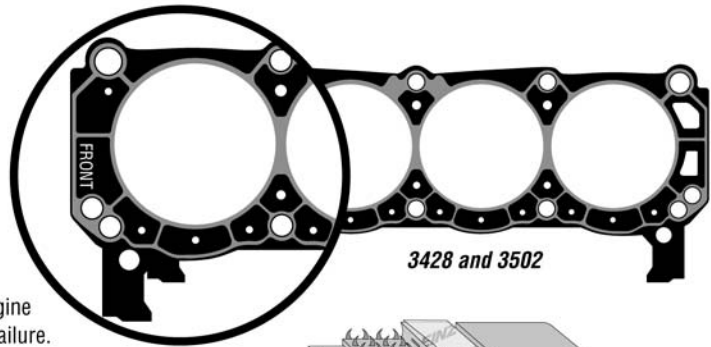

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

Ford Small Block V-8 Head Gasket

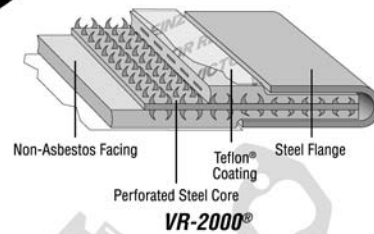

Issue:

Installing new head gaskets on late-model Ford small block V-8 engines can be confusing. The tendency is to install the gaskets with the lacing facing the same direction on both banks. This is incorrect because of the location of the coolant holes on the gaskets. Improper installation will lead to engine overheating and premature engine failure.

Resolution:

Victor Reinz replacement VR-2000® head gaskets use an "island sealing" concept with metal lacing that results in an improved coolant seal and limits head bending. To install the gaskets properly, the word "front" on the gaskets must be facing the front of the engine on both banks. The gasket lacing should be up on one side and down on the other side. If the gaskets are installed with the lacing in the same orientation on both sides, the rear coolant holes will be blocked, causing the engine to overheat.

Application:

Victor Reinz part numbers 3428 and 3502 are available for 1968 to 2000 5.0L (302 CID) Ford engines, 1963 to 1968 4.7L (289 CID) Ford engines, 1969 to 1997 5.8L (351W) Ford engines, 1970 to 1974 5.8L (351C) Ford engines, and 1975 to 1982 5.8L (351M) / 6.6L (400M) Ford engines. Please consult your *Victor Reinz Catalog* for specific applications and part numbers.

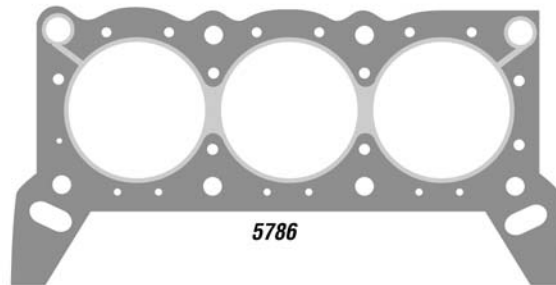

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

Ford 3.8L Head Gasket

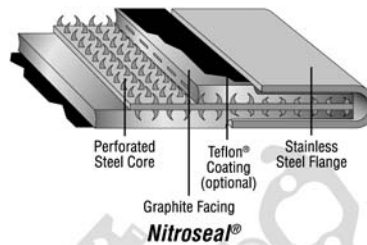

Issue:

Many 1982 to 1995 Ford 3.8L (232 CID) V-6 engines are prone to combustion seal failure. This usually happens when the engine has been remanufactured or when the cylinder head has been repaired. The failure occurs because the cylinder head and engine block have little tolerance for changes in bolt torque, hardware flatness, and surface finish.

Resolution:

To successfully seal the engine, a controlled density graphite gasket must be used to allow the engine hardware to move without seal loss during thermal expansion of the cylinder head and block. Victor Reinz offers a Nitroseat® replacement head gasket for this engine. The unique gasket will compensate for the changes that occur when resurfacing the engine. The Nitroseat gasket features a Teflon®-coated, high density graphite material clinched to a perforated steel core. The design provides a superior micro-seal and resists gasket fretting.

Application:

Victor Reinz part numbers 5816, 5815, and 5786 are available for 1982 to 1995 Ford 3.8L (232 CID) engines. (When installing the gasket, the condition of the sealing surface is critical. Use carbonless impression paper, part number JV311, to determine the engine's flatness.)

Note: Victor Reinz also recommends replacing the torque-to-yield head bolts, Victor Reinz part number GS33317, GS33219, or GS33194 when installing this gasket.

VICTOR REINZ®
G A S K E T S

Ford 4.6L Head Gasket

Issue:

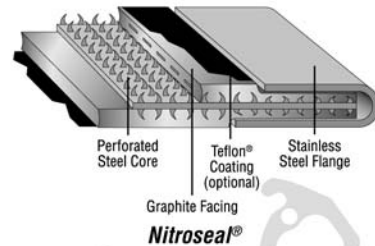

1991 to 2001 Ford 4.6L (281 CID) engines use a multi-layered steel head gasket that requires an extremely smooth surface finish. Engine block and cylinder head flatness are also critical when replacing this gasket. If the vehicle manufacturer's surface finish and flatness specifications are not adhered to, gasket failure will result.

5931

Resolution:

Victor Reinz offers a Nitroseat® replacement head gasket for this engine. This gasket is a Teflon®-coated head gasket composed of solid graphite material clinched to a perforated steel core. This gasket features excellent sealing capabilities. The Teflon coating provides good cold flow sealing and lubricity to ensure a long service life. This Nitroseat gasket also offers thermal conductivity and excellent coolant, oil, and fuel resistance. In addition, it is more accommodating of surface finish and surface irregularities than the original-equipment design.

Application:

Victor Reinz Nitroseat head gaskets are available for these applications: 1991 to 2001 SOHC Ford 4.6L (281 CID) engines and 1993 to 1999 DOHC Ford 4.6L (281 CID) engines. To replace the head gasket, use Victor Reinz part numbers 5931 (left side) and 5932 (right side).

Note: Victor Reinz also recommends replacing the torque-to-yield head bolts, Victor Reinz part number GS33269 (two sets per engine), when installing this gasket.

VICTOR REINZ®
G A S K E T S

Ford 2.3L Valve Cover Gasket

Issue:

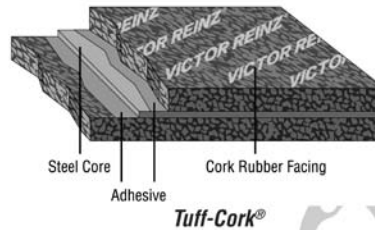

When replacing a valve cover on 1986 to 1994 Ford 2.3L (140 CID) engines, it's easy to tear the valve cover seal. This is because the bead is permanently molded to the valve cover and replacement of the complete valve cover assembly is normally required.

VS50027TC

Resolution:

Victor Reinz manufactures a Tuff-Cork® gasket for use with the vehicle's original valve cover. With Victor Reinz, you don't have to purchase a whole new valve cover just to solve a sealing problem. Just carefully remove the original, molded sealing bead, following the Victor Reinz instructions provided in the packaging. This procedure saves time and money by eliminating the need to buy a new valve cover.

Tuff-Cork®

Application:

Victor Reinz part number VS50152HTC is available for 1989 to 1994 Ford 2.3L (140 CID) HSC OHV pushrod engines, and part number VS50027TC is available for 1985 to 1988 Ford 2.3L (140 CID) engines with aluminum valve cover only.

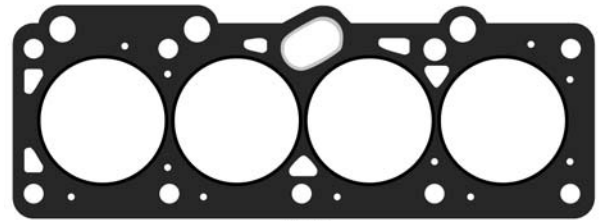

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

Ford Escort 1.6L and 1.9L Cylinder Head Gaskets

Issue:

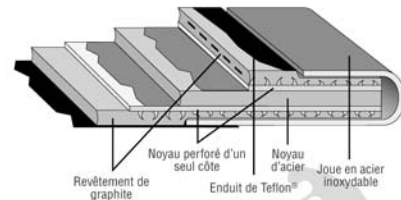

Ford uses a two-millimeter thick head gasket on 1981 to 1985 1.6L (98 CID) engines and 1985 to 1996 1.9L engines to avoid piston-to-valve interference. Some replacement gasket manufacturers use additional facing material to achieve the correct gauge. This can make the gasket excessively soft, resulting in torque loss and gasket failure.

5884

Resolution:

Victor Reinz offers a head gasket manufactured from VR-500® material that uses a unique combination of graphite and three steel cores to increase core size while minimizing the facing thickness. This gasket restores the original-equipment operating thickness, resulting in minimum torque loss while maintaining the balance of the combustion and coolant seals.

VR-500®

Application:

Victor Reinz part number 5739 is available for 1981 to 1985 Ford 1.6L (98 CID) engines and 1985 to 1990 Ford 1.9L (116 CID) engines, and part number is available for 5884 for 1991 to 1996 Ford 1.9L (116 CID) engines.

Ford 5.0L and 5.8L Valve Cover Gasket

Issue:

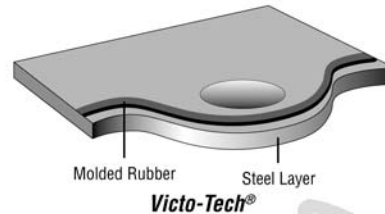

The original-equipment (OE) gasket design for late-model Ford 5.0L (302 CID) and 5.8L (351 CID) engines is a one-piece metal gasket with a molded rubber sealing bead. Technicians have asked the aftermarket to offer a replacement gasket that is identical to the OE design.

VS50203

Resolution:

Victor Reinz offers a Victo-Tech® replacement valve cover gasket, which consists of a thick steel core with a molded rubber sealing bead. In addition, the Victo-Tech gasket offers superior heat resistance and will not shrink after installation. The thick steel core assists in installation and also acts as a torque limiter.

Victo-Tech®

Application:

Victor Reinz part numbers VS50203, a gasket set, and VS50203S, a single gasket for either side, are available for late-model Ford 5.0L (302 CID) and 5.8L (351 CID) engines.

Note: This gasket can be used on earlier Ford 5.0L (302 CID) and 5.8L (351 CID) engines.

Ford Timing Cover and Water Pump Gaskets

Issue:

Many late-model performance engines, including the 1965 to 1991 small block Ford engines, have timing cover and water pump gasket applications that are very difficult to seal. The gaskets traditionally used for these applications tend to leak.

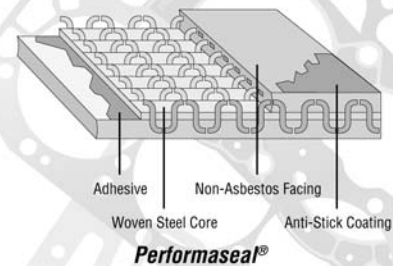

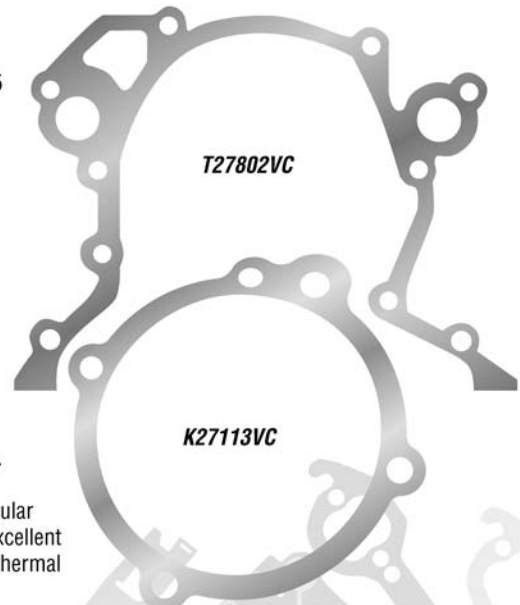

Resolution:

Victor Reinz offers a line of Performaseal® gaskets for these tough to seal applications. The material used to make these gaskets was originally developed as head gasket material for industrial engines. The Performaseal gaskets are comprised of a woven, perforated steel core secured to a composition facing with an anti-stick coating. The facing resists oil, gasoline, anti-freeze, and other corrosives. These gaskets provide a superior seal for irregular surfaces, minimal torque loss for a consistent load, and excellent radial strength to resist scrubbing and fretting caused by thermal expansion.

Application:

Victor Reinz part number T27802VC, a timing cover gasket, and part number K27113VC, a water pump gasket, are available for 1965 to 1991 Ford engines.

Note: Victor Reinz also offers Performaseal gaskets for small block Chevrolet and small block Chrysler timing cover and water pump applications.

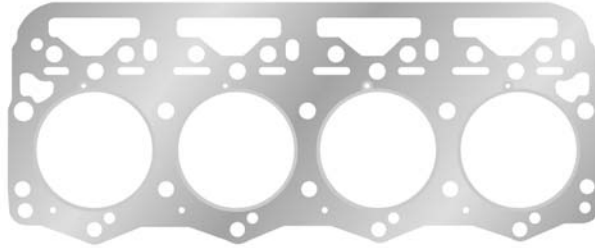

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

Ford 7.3L Power Stroke Head Gasket

Issue:

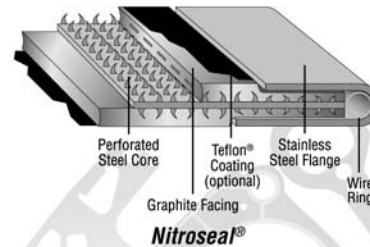

The Ford/Navistar 7.3L engine was redesigned in 1995 to what is called a "Power Stroke" diesel engine. Many aftermarket gasket suppliers have had difficulty developing gaskets for these engines, forcing installers to purchase original-equipment (OE) service gaskets from the dealer.

54204

Resolution:

The Victor Reinz Nitroseat® replacement head gasket is identical to the OE design and consists of graphite clinched to a perforated steel core with a wire fire-ring inside the flange to help contain the compression of the Power Stroke diesel.

Application:

Victor Reinz head gasket sets are available for 1995 to 1999 Ford 7.3L Power Stroke engines. Lower gasket sets are available through model year 2000. Individual replacement gaskets and seals are also available. Check the *Victor Reinz Catalog* for specific part numbers and availability.

General Motors 2.3L “Quad Four” Head Gasket

Issue:

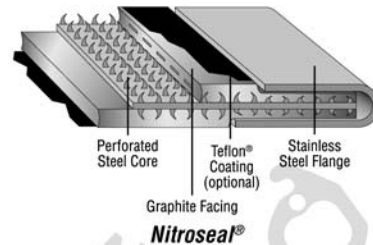

The original-equipment head gasket on General Motors (GM) 2.3L “Quad Four” engines has a tendency to fail prematurely, between 35,000 and 40,000 miles, due to combustion flange fatigue caused by movement between the head and block.

5870

Resolution:

Victor Reinz offers a Nitroseat® replacement cylinder head gasket for this engine. This gasket is made up of solid graphite facing material clinched to a perforated steel core. In testing, the Nitroseat gasket provided a service life up to 40 times longer than other aftermarket replacement head gaskets for the “Quad Four.” This performance is due to a sintered Teflon® metal flange, which greatly enhances the gasket load at its critical sealing areas and resists movement between the head and the block. The graphite composition also helps dissipate heat, preventing hot spots and gasket burnout.

Application:

Victor Reinz part number 5870 is available separately or as part of head set part number HS5870WB for GM 2.3L “Quad Four” engines. The head set also contains new torque-to-yield head bolts.

Note: Victor Reinz recommends that torque-to-yield head bolts always be replaced to ensure the correct clamping force.

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

General Motors 4.5L Head Gasket

Issue:

Coolant leaks may develop around the cylinder head bolts on General Motors (GM) 4.5L (273 CID) engines. These leaks occur when there is an insufficient gasket load on the pushrod side.

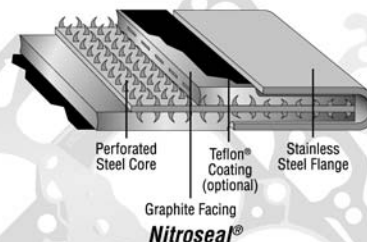

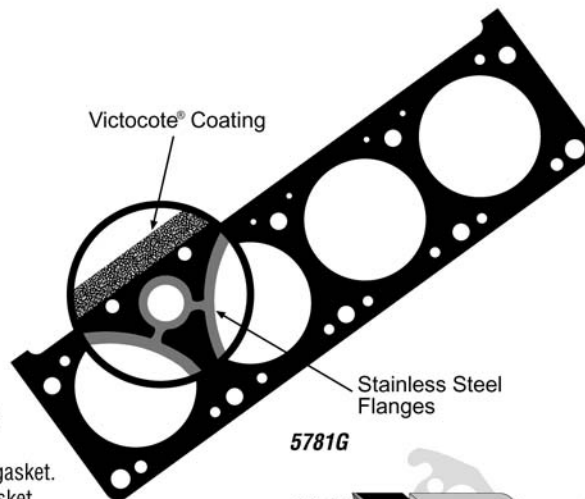

Resolution:

Victor Reinz offers a Nitroseat® replacement cylinder head gasket specifically designed for the GM 4.5L (273 CID) engine. This gasket is a Teflon®-coated head gasket composed of solid graphite material clinched to a perforated steel core. In addition, the gasket features a Victocote® coating on the pushrod side of the gasket. This extra coating increases the load on the gasket where it is needed.

The gasket also comes with laced stainless steel flanges, grommets around the bolt holes to distribute the bolt load evenly and to provide a seal around the head bolts. The graphite gasket also maintains a load even during thermal expansion and enhances heat distribution, eliminating hot spots and gasket burnout. Moreover, the Teflon coating resists gasket fretting during thermal expansion and contraction of the aluminum head.

Application:

Victor Reinz part number 5781G is available for 1988 to 1992 GM 4.5L (273 CID) engines.

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

General Motors 4.3L Head Gasket

Issue:

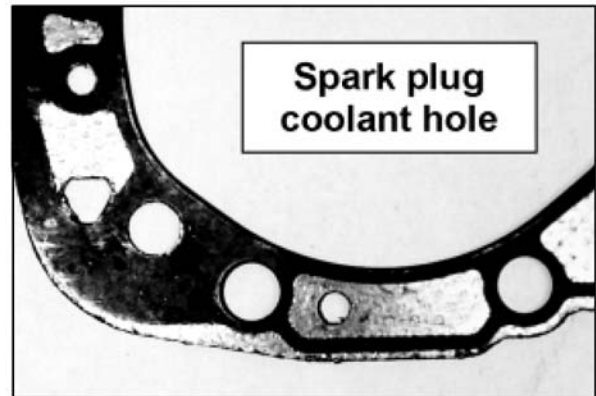

General Motors (GM) 4.3L (262 CID) V-6 engines from 1982 to 1995 tend to develop coolant leaks at the spark plug coolant hole between the bolt holes at the exhaust side of the cylinder head. This is usually caused by an insufficient bolt load between the cylinder head and engine block.

Resolution:

Victor Reinz has designed a single-sided Nitroseat® graphite head gasket to replace the original-equipment gasket. This graphite gasket does not require any additional sealant, and the unique "island sealing" design seals the coolant at the spark plug coolant holes at 60 psi, and includes a patented, lace flange for problem sealing applications. The seal also maintains the critical gasket operating thickness of .028". Other aftermarket gaskets are often twice as thick, which may cause combustion and emission problems, including poor engine performance and increased pollution.

Application:

Victor Reinz part number 5744 is available for 1982 to 1995 GM 4.3L (262 CID) engines.

5744

Single-Sided Nitroseat®

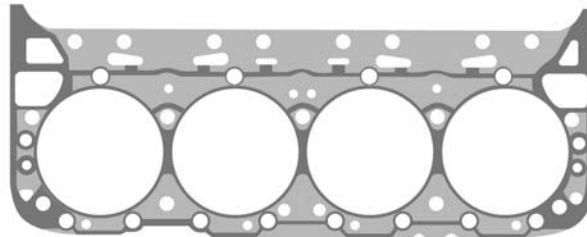

SEALING SOLUTIONS

VICTOR REINZ®

General Motors LT-4 Head Gasket

Issue:

Some aftermarket replacement head gaskets for 1995 to 1997 General Motors (GM) LT-4 engines have cylindrical shaped combustion openings. However, this particular engine requires a gasket with irregular shaped combustion holes. Using a gasket with round or cylindrical openings will result in increased cylinder volume, which may result in fuel puddling. This can cause the engine to detonate, resulting in burned pistons, damaged head gaskets, and other costly repairs.

5930

Nitroseal®

Resolution:

Victor Reinz offers a Nitroseal® replacement head gasket for this application. This gasket features a sintered Teflon®-coated sealing flange, and the high-density graphite gasket facing is mechanically clinched to a Starburst core. The Starburst core offers the maximum amount of torque retention for the GM LT-4 and is designed to operate between 0.045" to 0.050" thickness to maintain the required cylinder volume and compression. This gasket features pushrod locating holes for easy assembly and installation.

Application:

Victor Reinz part number 5930 is available for 1995 to 1997 GM LT-4 engines.

SEALING SOLUTIONS

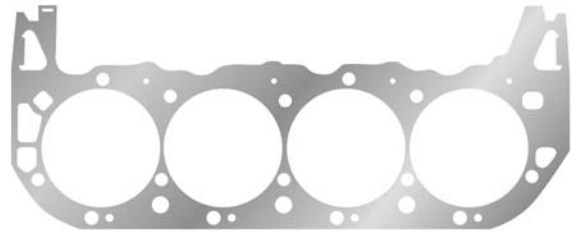

General Motors 7.4L Head Gasket

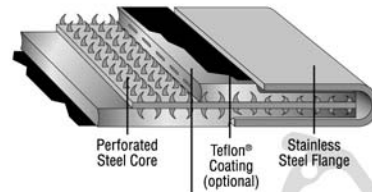

Issue:

General Motors (GM) 7.4L (454 CID) engines use two types of engine blocks: the Mark IV and Mark V. The Mark IV is found on 7.4L engines in model years from 1965 to 1990, and the Mark V is found on 7.4L engines in model years from 1991 and newer.

Often, installers will attempt to adapt a Mark IV cylinder head for a Mark V block. This conversion can be made if attention is paid to the coolant circulation. Mark IV and Mark V have different coolant flows and were originally designed for different head gaskets. If the conversion is not performed correctly, the engine will overheat, causing premature engine wear and damage.

4918 (Right Bank)
4923 (Left Bank)

Graphite Facing
Nitroseal®

Resolution:

Victor Reinz has designed two Nitroseal® head gaskets to specifically allow for this conversion. The installation requires Victor Reinz part number 4918 be installed on the right cylinder bank to maintain proper coolant circulation, and part number 4923 to be installed on the left cylinder bank for the correct coolant flow.

Application:

Victor Reinz part numbers 4918 (right bank) and 4923 (left bank), or part number 4886 for conventional Mark V applications and part number 3884SG for conventional Mark IV applications are available for GM 7.4L (454 CID) engines.

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

General Motors Small Block V-8 Front Timing Cover Seal

Issue:

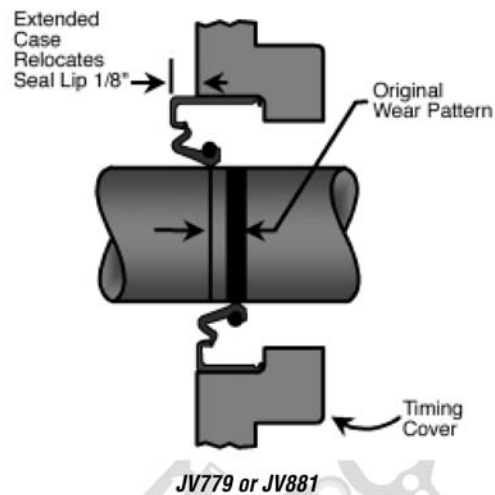

The front timing cover seal on General Motors (GM) 4.3L (262 CID), 5.0L (305 CID), and 5.7L (350 CID) engines has a tendency to leak because of wear grooves in the harmonic balancer.

Resolution:

Victor Reinz now offers an extended-case front timing cover seal. This seal does not require a repair sleeve to cover the wear groove in the harmonic balancer. Using a repair sleeve on a harmonic balancer can cause excessive heat and pressure on the sealing element, resulting in premature wear of the seal. The Victor Reinz extended-case front timing cover seal moves the sealing lip to a new location with the original diameter and surface finish.

Application:

Victor Reinz offers part numbers JV779 for 1969 to 1974 GM 4.3L (262 CID) engines, GM 5.0L (305 CID) engines, and GM 5.7L (350 CID) engines; and JV881 for 1985 to 1993 GM 4.3L (262 CID) engines; 1976 to 1993 GM 5.0L (305 CID) engines; and 1976 to 1996 GM 5.7L (350 CID) engines.

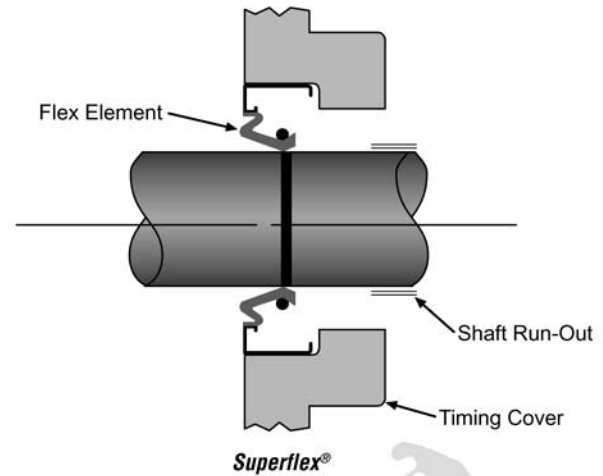

SEALING SOLUTIONS

General Motors 3.8L Front Timing Cover Seal

Issue:

Timing cover alignment problems on many 1975 to 1987 General Motors (GM) 3.8L (231 CID) V-6 engines caused engineers to develop a “shedder and rope” seal instead of the conventional rubber seal found on most engines. However, the original equipment design front timing cover seal on this engine is difficult to install and may not seal if the installation is not completed correctly. Proper timing cover alignment is critical to the engine’s performance or coolant leaks will result.

Resolution:

Victor Reinz now offers a front timing cover seal for the GM 3.8L (231 CID) V-6 engine that replaces the original “shedder and rope” design. This Superflex® seal is easy to install and features a unique flex design that allows the seal to compensate for extreme shaft run-out and shaft-to-bore misalignment. The Superflex seal maintains contact with the shaft throughout operation, eliminating potential leaks, and the angle of contact between the Superflex lip and the shaft surface remains constant, regardless of run-out.

Application:

Victor Reinz offers three timing cover sets, which include this Superflex® seal. Part numbers JV1043SF, JV1051SF, and 65025SF are available for 1975 to 1987 GM 3.8L (231 CID) engines.

General Motors Small Block V-8 Seal Extender

Issue:

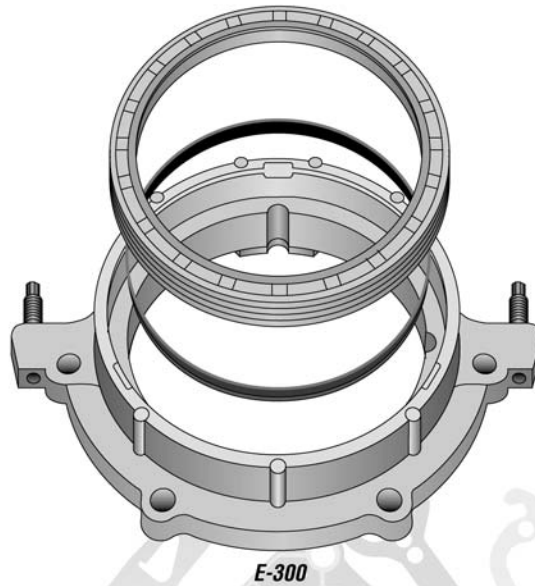

Many 1986 to 1996 small block General Motors (GM) engines, including the 4.3L (262 CID), 5.0L (305 CID), and 5.7L (350 CID), experience a worn crankshaft seal area when using a one-piece rear main seal.

Resolution:

Victor Reinz now offers a rear main seal extender for late-model GM 4.3L (262 CID), 5.0L (305 CID), and 5.7L (350 CID) 90 degree engines. This seal extender may be used during an in-frame replacement or a complete overhaul of the engine. This patented seal extender moves the sealing lip to a new unworn surface on the crankshaft. The seal extender also prevents premature seal wear by eliminating the need for a wear sleeve on the crankshaft. Wear sleeves increase the seal deflection angle, causing accelerated seal wear. The extender is designed to fit into the back of the oil seal, making installation easy.

Application:

Victor Reinz part number E-300 is available for 1986 to 1996 GM 4.3L (262 CID), 5.0L (305 CID), and 5.7L (350 CID) engines.

SEALING SOLUTIONS

General Motors 6.6L Rear Main Seal

Issue:

When rebuilding a 1970 to 1976 General Motors (GM) 6.6L (400 CID) engine, the crankshaft bore can become oversized during the align boring operation. This causes the original rear main seal to fit poorly and oil to leak past the seal. When align boring this engine, the rear main seal should always be replaced.

JV1603

Resolution:

Victor Reinz offers a rear main seal for this engine that will accommodate the O.D. 2.8406 to 2.8415 seal area. Because it is wider than the original-equipment seal, the replacement rear main seal prevents the oil leaks that can occur in the align boring process.

Application:

Victor Reinz part number JV1603, a rear main seal, is available for 1970 to 1976 GM 6.6L (400 CID) engines.

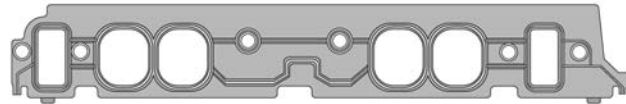

SEALING SOLUTIONS

VICTOR REINZ®

General Motors 7.4L Intake Manifold Gasket

Issue:

Standard composition intake manifold gaskets on late-model General Motors (GM) 7.4L (454 CID) engines tend to fail prematurely due to an insufficient bolt load. These type of gaskets generally leak coolant at the rear of the engine where it is difficult to detect.

MS16091

Victo-Tech®

Resolution:

Victor Reinz offers a Victo-Tech® plastic carrier-style gasket with a unique silicone bead to maintain a superior coolant seal.

Application:

Victor Reinz part number MS16091 is available for 1996 and later General Motors 7.4L (454 CID) engines.

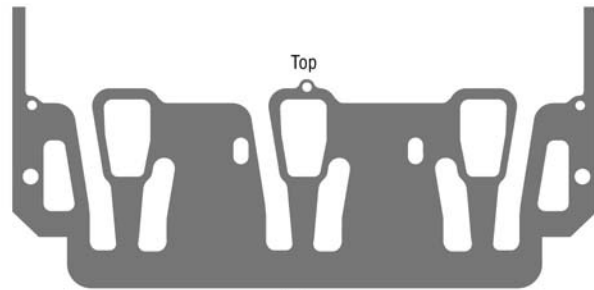

SEALING SOLUTIONS

General Motors 3.1L Intake Manifold Gasket

Issue:

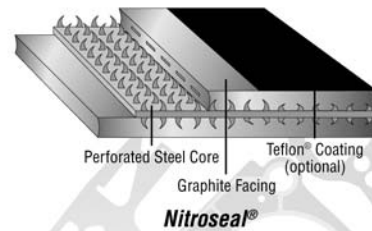

On General Motors (GM) 3.1L (189 CID) V-6 engines, coolant leaks have a tendency to develop around the original-equipment, valley-pan-style intake manifold gasket. This leakage occurs when the intake manifold sticks to the gasket as it moves across the gasket surface, causing gasket fretting. Coolant leaks can contaminate the engine oil.

Bottom
MS15704

Resolution:

Victor Reinz offers a Nitroseat[®] replacement intake manifold gasket for this engine. This gasket design is composed of a high-density graphite facing with a Teflon[®] coating mechanically clinched to a perforated steel core. This unique design allows the intake manifold to slide across the gasket surface without damaging the gasket. In testing, the Victor Reinz gasket ran for over 10,000 cycles with no leaks. By comparison, a competitor's gasket ran for an average of 700 cycles.

Application:

Victor Reinz part number MS15704 is available for 1988 to 1990 GM 3.1L (189 CID) VIN Code T passenger car engines, and part number MS15704A is available for 1991 to 1994 GM 3.1L (189 CID) VIN Code T passenger car engines. For best results, follow the installation instructions provided with the gasket.

General Motors 5.7L Oil Pan Gasket

Issue:

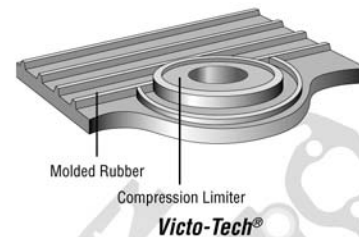

Many technicians have become used to working with a one-piece rubber oil pan gasket, popular on many late-model engines. Consequently, they've asked the aftermarket to provide similar style gaskets for engines like the early model General Motors (GM) 5.7L (350 CID) V-8 engines.

OS30568RLH and OS30568RRH

Resolution:

Victor Reinz offers a Victo-Tech® molded rubber replacement oil pan gasket for GM 5.7L (350 CID) engines. This gasket consists of a revolutionary one-piece design for easy installation. In addition, there are no joints to glue, eliminating potential leak paths. The Victo-Tech gasket's features include load limiters to prevent overtightening, a higher temperature resistance than cork-rubber gaskets, and no torque loss after installation. Victor Reinz also offers two different part numbers, one for the right side and one for the left side, so there is no need for cutting or fabrication.

Application:

Victor Reinz part numbers OS30568RLH (left side) and OS30568RRH (right side) are available for 1975 to 1985 GM 5.7L (350 CID) V-8 engines. Victor Reinz also offers one-piece oil pan gaskets for many other small block GM engines.

General Motors 4.3L Oil Pan Gasket

Issue:

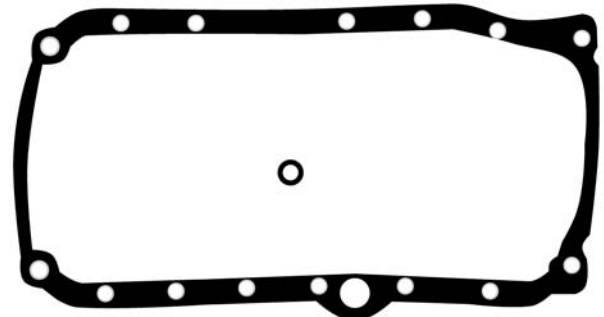

Some late-model engines, like the 1986 to 1993 General Motors (GM) 4.3L (262 CID) V-6 engine, are specifically designed to use a molded silicone rubber oil pan gasket.

Resolution:

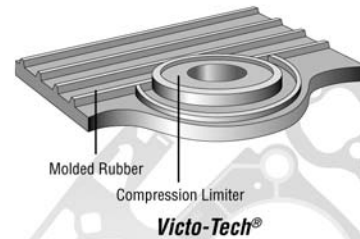

Victor Reinz offers a Victo-Tech® molded silicone rubber oil pan gasket for the GM 4.3L engine. This one-piece gasket is designed for easy installation. The molded rubber gasket features compression limiters for a secure seal and to prevent over torquing, as well as increased temperature resistance over cork-rubber gaskets. The gasket does not require a sealant, since there are no joints, and after installation, there is no torque loss, which improves sealing. The superior molded rubber design helps eliminate costly comebacks.

Application:

Victor Reinz part number OS32485B is available for 1986 to 1993 GM 4.3L (262 CID) engines. Victor Reinz also offers oil pan and valve cover Victo-Tech gaskets for many other GM, Ford, and import applications.

General Motors 5.7L Water Outlet Gasket

Issue:

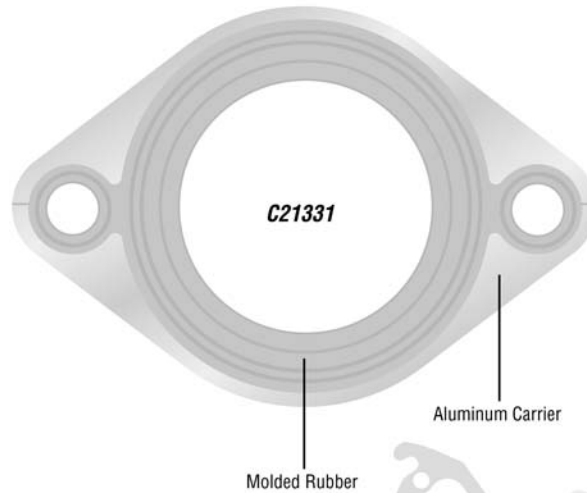

Water outlet gaskets on 5.7L (350 CID) General Motors (GM) performance engines often fail prematurely because of surface irregularities between the water outlet housing and the intake manifold. This failure can lead to coolant leaks.

Resolution:

Victor Reinz offers a Victo-Tech® water outlet gasket for these engines. This gasket is composed of an aluminum carrier with a molded silicone bead to ensure a secure seal and is unique because it actually seals the housing and holds the thermostat flange in place. The aluminum body prevents overtightening, and is compatible with all manifold materials. The superior tensile strength over existing designs, and higher torque retention, requires a lower bolt load to seal the application.

Application:

Victor Reinz part number C21331 is available for 1967 to 1988 5.7L (350 CID) GM engines.

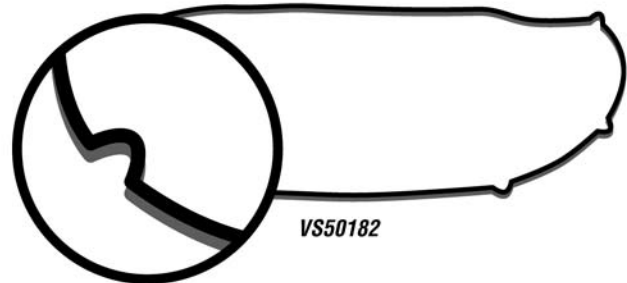

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

General Motors 7.4L Valve Cover Gasket

Issue:

The valve cover on 1991 and later General Motors (GM) 7.4L V-8 (454 CID) engines does not provide for a consistent and uniform load across its sealing surface. If the valve cover gasket cannot provide a secure seal between the valve cover and the cylinder head, engine oil loss and smoking may occur.

Resolution:

Victor Reinz offers a Victo-Tech® replacement gasket constructed of molded silicone. The gasket fits in the receiver groove, which is an integral part of the valve cover.

Install a dry gasket into the valve cover and tighten to the manufacturer's specifications. When the vehicle is in operation and the engine oil comes in contact with the gasket, it swells approximately 30 percent from its original size, creating the load required to seal the valve cover.

Application:

Victor Reinz part number VS50182, a set, and part number VS50183, a single gasket, are available for most 1991 and later GM 7.4L (454 CID) engines.

SEALING SOLUTIONS

VICTOR REINZ®
G A S K E T S

General Motors 4.8L, 5.3L, and 6.0L Truck Valve Cover Gasket

Issue:

Replacement valve cover gaskets for 4.8L, 5.3L, and 6.0L General Motors (GM) truck engines have not been available in the aftermarket until recently. As a result, many technicians may be unfamiliar with proper gasket replacement procedures. These engines use a silicone rubber gasket, which functions differently than many conventional valve cover gaskets.

Resolution:

Victor Reinz offers a new Victo-Tech® silicone rubber replacement valve cover gasket for these engines. The gasket is installed into a receiver groove molded into the valve cover. Then, the valve cover is installed back into the engine until it bottoms on the engine casting. It is not uncommon for light loading to occur during installation, but technicians must resist the temptation to apply sealants to the gasket. This style of gasket consists of silicone rubber, and swells approximately 30 percent when it comes into contact with oil. Because it's confined in the receiver groove, the swell creates pressure against the casting, which creates the desired seal.

Application:

Victor Reinz part number VS50250 is available for 1999 to 2002 GM Vortec 4.8L engines, 2002 GM Vortec 5.3L engines, and 1999 to 2002 GM Vortec 6.0L engines.

General Motors 3.1L and 3.4L Intake Manifold Gaskets

Issue:

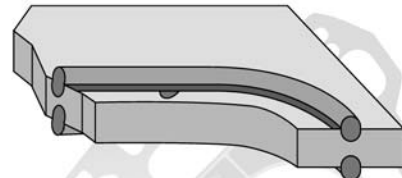

Many 1999 to 2002 General Motors (GM) 3.1L engines (VIN Code J) and 1996 to 2002 GM 3.4L engines (VIN Code E) are experiencing premature intake manifold gasket failures. The one-piece plastic carrier/molded silicone style gasket fails around the silicone beading, possibly due to a breakdown of the Organic Acid Technology (OAT) coolant used in these engines, loss of bolt load, or a crack in the carrier caused by overtightening the manifold bolts.

MS16259

Resolution:

Victor Reinz offers a new Victo-Tech® manifold gasket set to solve this problem. The set includes high-quality manifold gaskets and the plenum chamber gasket. Victor Reinz recommends changing the engine coolant when replacing the manifold gaskets. Moreover, the manifold surface and cylinder head surface must be flat (.002 inches in a 6 inch span), smooth (Ra 20-60 micro-inch), and free of oil, coolant, and sealants when the new gaskets are installed. Follow the recommended GM procedure for tightening the manifold fasteners and apply an anaerobic thread lock to the eight lower manifold bolts.

Victo-Tech®

Application:

Victor Reinz part number MS 16259 is available for 1999 to 2002 GM 3.1L (VIN Code J) engines and 1999 to 2002 GM 3.4L (VIN Code E) engines.

Honda 1.3L and 1.5L Head Gasket

Issue:

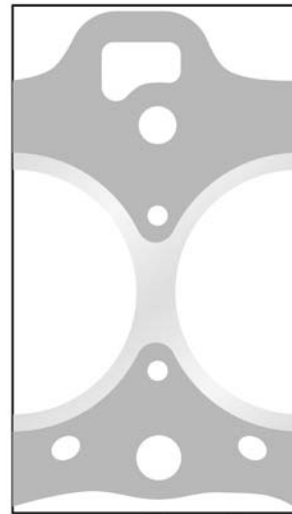

Many 1984 to 1987 Honda 1.3L and 1.5L engines have a tendency to experience combustion leaks between the two cylinders due to poor coolant circulation.

Resolution:

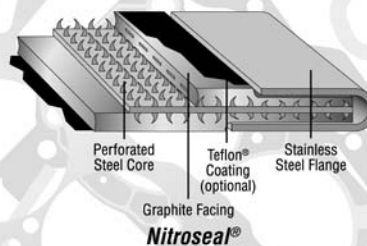

Victor Reinz offers a Nitroseal® replacement head gasket for Honda 1.3L and 1.5L engines that helps eliminate this problem. This gasket is composed of Teflon®-coated graphite clinched to a perforated steel core with a stainless steel flange. Victor Reinz increased the gauge, or "thickness," of the flange material. This allows for greater flange loading between the engine block and the cylinder head, eliminating the combustion leakage common to these engines. This stainless steel flange will survive this harsh environment, and the graphite facing results in better heat dissipation to reduce the amount of heat directed to the combustion seal.

Application:

Victor Reinz part number 3782 is available for 1984 to 1987 Honda 1.3L and 1.5L engines.

3782

Toyota 3.4L Truck Head Gasket

Issue:

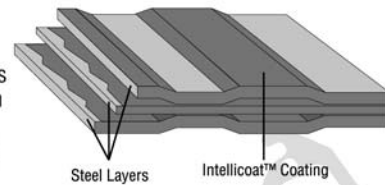

Multi-layer steel (MLS) cylinder head gaskets on 1995 to 2000 Toyota 3.4L truck engines can cause installation difficulties for many aftermarket technicians. Conventional MLS gaskets require very smooth surface finishes, difficult for many shops and technicians to achieve.

54137

Resolution:

Victor Reinz offers MLS gasket designs that are both state-of-the-art and state-of-the-industry. Special embossed spring steel layers are selectively coated with Intellicoat™, a new polymer coating. Intellicoat (recognized by its bright blue color) is much more forgiving on surface finish than many other MLS gaskets. Rather than the Ra 7-15 micro-inch required for competitors' designs, MLS gaskets with Intellicoat will work in the range of Ra 20-60 micro-inch, with a desirable finish of Ra 30 micro-inch. Most shops can achieve this tolerance with relative ease.

Multi-layer Steel

Application:

Victor Reinz part number 54137, a head gasket set, is available for 1995 to 2000 Toyota 3.4L 5VZFE, DOHC, V-6 truck engines. The set contains both the right and left bank head gaskets.

Note: Head bolts must be replaced when replacing the head gasket. Use Victor Reinz replacement head bolts, part number GS33353 (two required per engine).

VICTOR REINZ®
G A S K E T S

Carbonless Impression Paper

Issue:

During engine rebuilding, it is critical that the cylinder head and block are checked for warpage. If an inspection is not thorough and accurate, and if any warpage goes undetected, the head gasket cannot adequately seal the engine.

JV311

Resolution:

Carbonless impression paper provides a more consistent and accurate reading than other methods used to detect warpage. The paper can also be used as a visual aid to show a customer where the high and low spots exist. Carbonless impression paper is 0.006" thick, so the lack of an impression indicates a surface that is out-of-flat by at least 0.006".

Application:

Victor Reinz carbonless impression paper comes in sheets 10" by 30" and is available in sets of 2 sheets, part number JV311, or 12 sheets, part number JV312. Use 1 sheet per cylinder head. Follow the instructions included with the paper, and use Victor Reinz punch set TK950.

Note: Victor Reinz does not recommend using carbonless impression paper on engines with liners that protrude above the block. These engines must always have a gasket between the head and the block, or the stress on the liner could crack the engine block.

SEALING SOLUTIONS

Motorhome Manifold Gaskets

Issue:

Motorhomes are prone to very high manifold temperatures, resulting in unsafe fumes, noise, and the potential for fire. These high temperatures are caused by limited airflow over the exhaust manifold and may cause the gasket to burnout and leak.

Resolution:

Victor Reinz offers Nitroseat[®] manifold gaskets that can withstand temperatures up to 1800° F in a clamped state, preventing gasket burnout. Nitroseat[®] gaskets feature a unique graphite composition that can stand up to this extreme temperature environment without causing torque loss or a failed manifold seal.

Application:

Victor Reinz offers part number 95021SG for 7.4L Chevrolet engines, part number 95091SG for Ford 6.9L engines, part number 95026SG for Chrysler 440 CID engines, or part number 95028SG for 403 CID and 455 CID Oldsmobile engines.

Exhaust Manifold Gasket

Issue:

Installing an exhaust manifold gasket on small block engines during an under hood repair can be difficult. This is because of the limited workspace and the challenge of aligning the gasket, the manifold, and the bolt holes.

95177SG

Perforated Steel Core
Graphite Facing

Nitroseat®

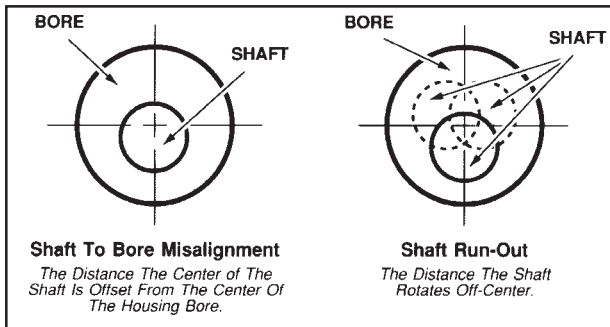

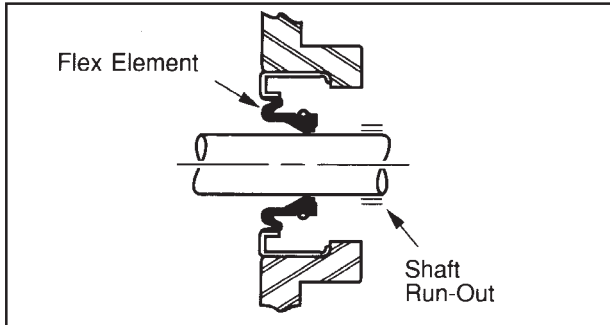

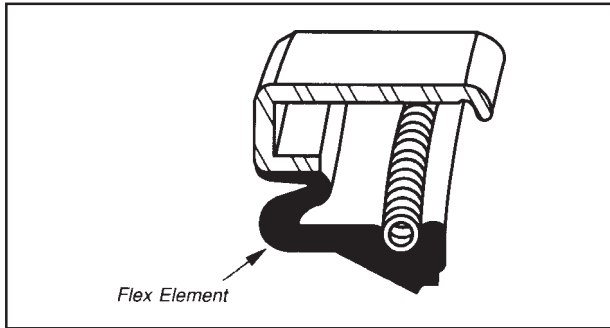

Resolution:

Victor Reinz offers Nitroseat® replacement exhaust manifold gaskets to make this type of installation easier. The Victor Reinz design features slotted bolt holes at the ends of the gasket that allow it to be installed over the end bolts that are holding the manifold to the cylinder head.

These gaskets are specially designed with the technician in mind. The two slotted holes aid in the installation process by allowing a consistent clamp to be applied to the gasket, resulting in a permanent seal.

Application:

Victor Reinz part number 95177SG is available for small block Ford engines, and part number 95094SG is available for small block Chevrolet engines. Check the *Victor Reinz Catalog* for specific applications and part numbers.

SUPERFLEX

The unique flex design of the Superflex sealing element enables this seal to cope with extreme shaft eccentricity (run-out) and shaft to bore misalignment.

The Superflex sealing element will maintain shaft contact assuring leak-free operation in the most demanding of applications.

The angle of contact between the Superflex lip and the shaft surface remains constant regardless of run-out. This contributes to low wear rates and prolonged seal life.

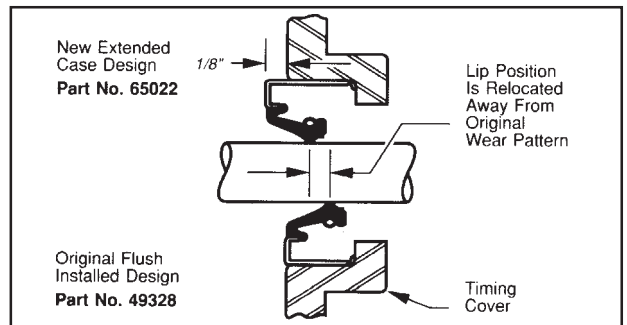

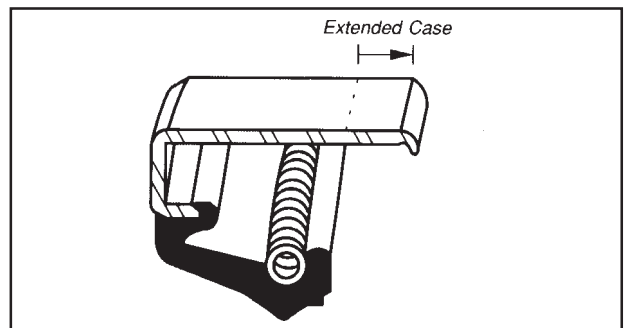

Superflex seals will be identified with an "SF" suffix on the part number as will all timing cover "JV" sets which contain them.

All full sets which contain Superflex seals will have this indicated on the label.

EXTENDED CASE TIMING COVER SEAL

The extended case timing cover seal 65022 (used on G.M. small block V8 engines) eliminates the need for a shaft repair sleeve on shafts that have a groove worn into them by the timing cover seal. When the new extended case seal is driven into the timing cover bore, the extended case relocates the sealing lip outward 1/8" from the original wear pattern.

The "**Lip Relocator**" is used in JV779, JV881 and in the related Chevrolet full sets.

Domestic and Import Fuel Injection Systems

Illustrated below is a typical four cylinder fuel injection system and a typical V6 or V8 fuel injection system. Most fuel injection systems consist of the following:

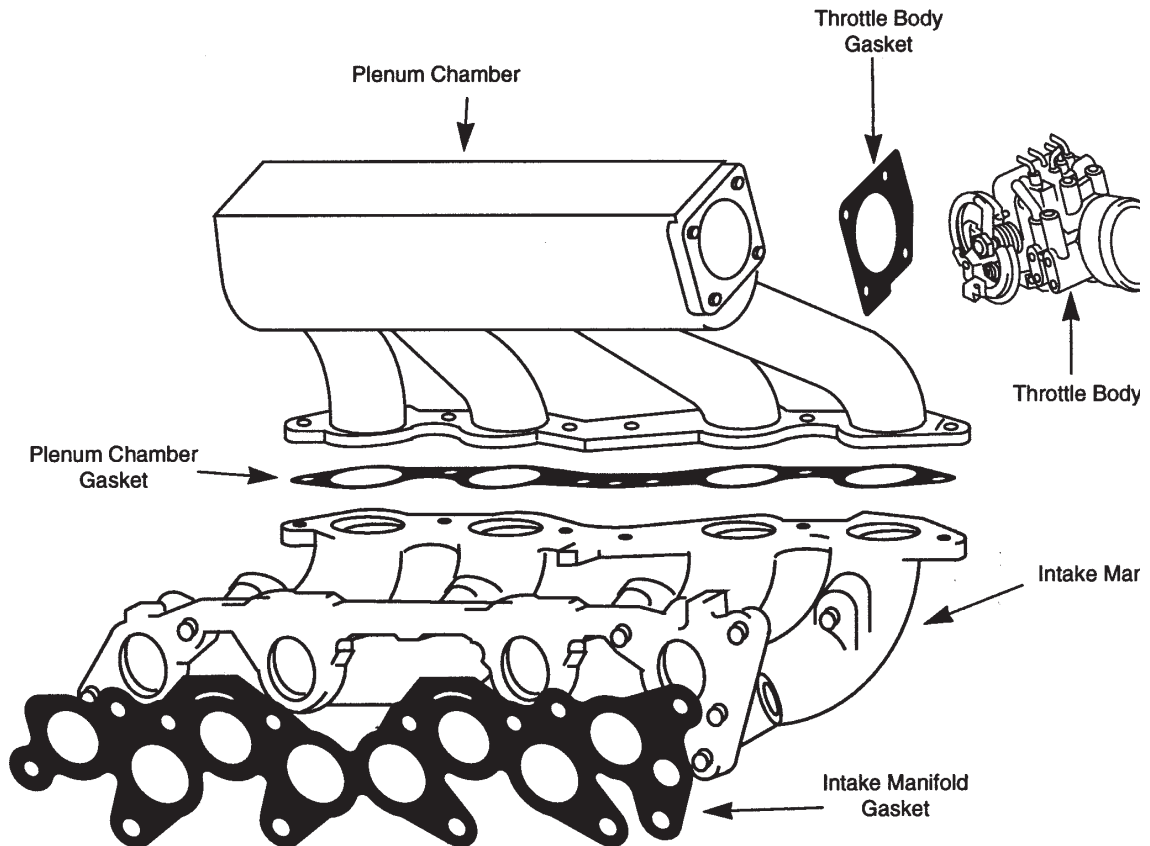

- Throttle Body
- Throttle Body Gasket
- Plenum Chamber
- Plenum Chamber Gasket
- Intake Manifold
- Intake Manifold Gasket

There are some fuel injection systems that also have a center intake manifold gasket or have intake manifold tube gaskets. These are not illustrated

Performance Gaskets

Cylinder Head Gaskets

Nitroseal® by Victor Reinz® is a proven, performance cylinder head gasket. Nitroseal® performance cylinder head gaskets are composed of 100% graphite facing material combined with a perforated steel core and stainless steel combustion flanges. The graphite facing material can withstand the motion of the cylinder head and block and the heat often experienced in a performance engine. The graphite facing material also has a unique property referred to as “thermal conductivity.” That means the material actually transfers heat away from the heat source. One good example of this is the Small Block Chevrolet. The back-to-back exhaust valves on this engine tend to create a lot of heat, often resulting in a burnt gasket. The Nitroseal® performance cylinder head gasket allows the heat to move away from the hot spot to the coolant holes of the gasket, preventing gasket burnout.

Nitroseal® by Victor Reinz® is the perfect choice for a moderate, street performance engine, naturally aspirated and under a 12 to 1 compression ratio. For engines using a turbocharger, supercharger, or nitrous oxide, firing pressure within the combustion chamber is greatly increased. For these applications, look to Solicor® performance cylinder head gaskets for your cylinder head sealing needs.

Solicor® by Victor Reinz® is also a proven, performance cylinder head gasket. The technology that went into Solicor® performance cylinder head gaskets was initially for diesel applications where 20 to 1 and greater compression ratios are necessary. This technology has been applied to the Solicor® performance cylinder head gasket product offering. Solicor® performance cylinder head gaskets are composed of a high-density, non-asbestos facing material laminated to a solid steel core. This core provides radial strength for a wire ring encased in the stainless steel combustion flange. Solicor® performance cylinder head gaskets are coated with a unique fluorocarbon coating to ensure the microseal of fluids and to help resist the scrubbing action of the cylinder head.

Solicor® by Victor Reinz® is designed with the combustion seal in mind. For those applications where 12 to 1 or greater compression ratios are prevalent and for turbo-charged, supercharged, and nitrous oxide engines, Solicor® performance cylinder head gaskets are the gaskets that will perform for you.

Exhaust Header Gaskets

Nitroseal® by Victor Reinz® performance exhaust header gaskets are available for the most popular engine applications. The graphite facing material can withstand the motion of the cylinder head and exhaust header, as well as the heat. The graphite facing material also has a unique property referred to as “thermal conductivity.” That means the material actually transfers heat away from the heat source. Also, it is extremely conformable. Look to Nitroseal® by Victor Reinz® to seal your exhaust headers.

Performance Gaskets

Intake Manifold Gaskets

Two different materials are used for our intake manifold gaskets: Nitroseat graphite material and a premium, non-asbestos composition facing material which can be trimmed to fit. Each has special characteristics, as follows:

Nitroseat® by Victor Reinz® performance intake manifold gaskets are composed of 100% graphite facing material combined with a perforated steel core. The graphite facing material can withstand the motion of the cylinder head and intake manifold, as well as the heat often experienced in a performance engine. The graphite facing material also has a unique property referred to as “Thermal conductivity.” That means the material actually transfers heat away from the heat source. Also, it is extremely conformable.

Nitroseat® by Victor Reinz® performance intake manifold gaskets are available in all the popular port sizes, limiting the amount of trimming when matching ports. Many are available with blocked heat cross-overs for improved performance.

Victor Reinz® Gaskets also offers a premium, non-asbestos facing material for intake manifold applications. This line of intake manifold gaskets is designed for the engine builder and enthusiast who requires trim-to-fit intake manifold gaskets. Some include elastomeric beads to ensure a permanent seal.

Valve Cover and Oil Pan Gaskets

TuffCork® by Victor Reinz® is the premier material to use for valve cover and oil pan applications. It features excellent heat resistance - up to 400° F in the “H” Series, a steel core for excellent torque retention and easy installation, and excellent resistance to engine fluids.

TuffCork® by Victor Reinz® is composed of a cork facing on both sides of a steel core. TuffCork® prevents over-torquing and provides better torque retention than regular cork gaskets. The steel core provides the rigidity needed for easy installation, and prevents gasket blowout.

“**H**” **Series** valve cover gaskets are made using a higher temperature resistant, polyacrylic rubber binder and smaller cork granules. This design combines sustained temperature resistance to 400° F and a denser gasket with even more torque retention. These gaskets are available in various thicknesses for certain applications.

Performance Gaskets

VICTO - STACK CHART
Guide to Gasket Thickness and its
effects on Compression Ratio.

PERFORMANCE

Spacer Guide

Note: Figures are “approximate and based on calculations made on a standard bore, standard deck height, 1995 Honda 1.6L V-TEC”. If your engine has had modifications to the bore, deck, or head, you will need to factor these into your selection process.

Performance Gaskets

Big Block Chevrolet Identification Information

Chevrolet Big Block V8 engines manufactured since 1965 can be broken down into two distinct groups. Engines manufactured between 1965 & 1990 are known as Mark IV or Gen IV engines. During this period of manufacturing, there has been a variety of changes to the head gasket due to engine modifications. Engines manufactured from 1991 to present are classified as Mark V or Gen V engines. The change from the Mark IV to the Mark V design has forced another change in the head gasket design. This is all very confusing due to the fact that the overall bolt pattern and bore spacing of the head and block has remained unchanged from the beginning. The design differences between the Mark IV and the Mark V engines causes interchangeability problems with hardware and head gaskets. Please pay special attention to the items listed when selecting the proper head gasket.

The primary area of concern is a coolant opening on the intake (valley) side of the engine. There may be certain combinations of Mark IV and Mark V cylinder heads and blocks which may not have enough material present to seal fluids. To determine if enough material is present, make a carbon impression (*per the instructions on the following page*) If the impression does not reveal at least 1/4" (.250") of contact around the coolant holes leakage may occur. Special welding and or machining may be necessary for this combination of hardware to properly seal (Contact a qualified engine machinist for details).

The gaskets for the Mark V, Mark IV truck and the Mark IV Bow Tie have one set of coolant holes removed from both ends of the gasket to match the block. While the Mark IV passenger and High Performance block have the additional holes at both ends.

Part numbers 4918 and 4923 were designed to accommodate some of the passenger car and high performance blocks and heads when the lower coolant holes are available or drilled. Head gasket #4918 is used on the right bank of the engine because it locates the extra coolant hole in the rear of the engine. While #4923 is used on the left side of the engine to locate the coolant hole in the rear of the engine.

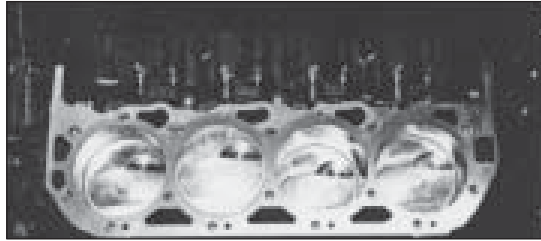

For additional information, refer to the instructions supplied with the gasket, or contact a qualified engine machinist.

Gen V (5) Block and Mark IV (4) Head Installation

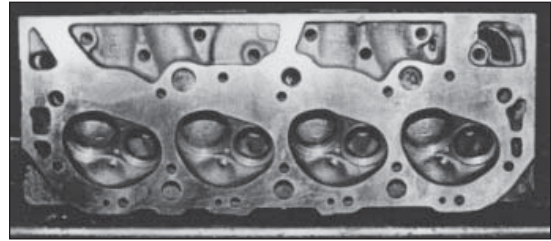

CAUTION!

As this is a unique installation, Gen V Block using Mark IV heads, extra care should be taken to insure the proper loading of head gasket around certain water openings along the top of the block.

As with any cylinder head, various revisions and casting changes have taken place, so it is with Mark IV heads. Some cylinder heads may require additional material to be added to the cylinder head machined surface.

GEN V (5) BLOCK

MARK IV (4) HEAD

<p>— Using Carbonless Impression Paper, JV311 (2 pcs.) or JV312 (12 pcs.) and TK950 Punch Set, place impression paper on block and install head.</p>	
<p>— A minimum of 1/4" of contact should be evident on paper. If not, material may be added as shown.</p>	
<p>— Braze or weld material to possible critical sealing areas.</p>	
<p>— Detail of added material approximately 1/4" to edge of head.</p>	
<p>— Test was repeated with "modified" Mark IV head. Note area around coolant passage which clearly shows 1/4" contact between head and block.</p>	

Complete instructions on the use of the Carbonless Impression Paper are included in JV311 or JV312

Performance Gaskets

Performance Head Gasket Installation

Before installing any head gasket, make sure the engine hardware has been thoroughly checked (cracks, scratches, threaded holes, etc.). Clean all threaded holes in the engine, taps are available for the cleaning of threads. Remove any previous bolt sealer, carbon, or rust below the line of previous engagement.

The head and block must be smooth and flat, Carbon Impression paper is the best way to determine hardware condition. Recommended smoothness for cast iron is 60-100 Ra and 20-50 Ra for aluminum.

When possible, replace the dowel pins when installing a head gasket. Dowel pins provide the only reference point for the fit of the gasket.

Once the gasket is placed onto the engine, recheck the alignment and check the combustion seal. The inside diameter of the gasket should not fall into the combustion opening or lay on the chamfered area of the block.

Torquing Procedure

When studs are being used, follow the procedures recommended by the stud manufacturer. Use thread sealant when necessary, or thread lock if required. Check to insure that the studs remain perpendicular to the block when they are installed, to avoid any potential interference through the head bolt holes.

It is recommended that hardened washers be used for both bolts or studs after installation. When using head bolts, lubrication under the head and at the threads is critical to attain proper load on the bolt, (If studs are used lubricate under the nut). Using the proper lubrication is very important, follow the recommended procedure from the fastener supplier.

Following the recommended sequence for head installation is crucial to insure gasket reliability. During the multi-step torquing procedure, continue to follow the recommended sequence. A smooth continuous motion is important when applying bolt torque, for every step.

In extreme cases (racing), a re-torque can be used. When the engine has maintained operating and returned to room temperature, retorquing can then be done. To achieve maximum amount of clamping force, loosen each fastener then tighten back to the original torque value.

Performance Gaskets

Performance Intake Manifold Installation

Make certain that the mating surfaces of the manifold and cylinder head are clean, dry and flat. Be sure to check aluminum component surfaces closely, as the scraping and cleaning process could possibly damage the mating surfaces.

Carefully check the gaskets and hardware to insure that you have sized the components correctly. (Port alignment and bolt centers are the most critical dimensions).

A quality adhesive should be used to place the intake manifold gasket on to the cylinder head. In the narrow wall between the ports a thin film of adhesive is appropriate.

If RTV type products are used as a sealer on the gaskets be sure to use only the necessary amount. Any uncured RTV will act as a lubricant causing gasket damage. The gasket may extrude or split when excessive RTV is used.

Place the intake manifold on the engine and finger tighten the bolts in sequence to set the gasket permanently in place. (If working on a V-type engine, do not use the end strips while setting the adhesive.)

After the adhesive has dried, remove the intake manifold and check the gasket for alignment. At this time, trim away any gasket material that reaches inside the ports.

After completing any necessary trimming, reinstall the intake manifold and torque to the recommended specifications. **For best intake clamp load, use at least a three step torquing procedure.**

End Strip Installation for V-Type Engines

Make sure that the mounting surface on the block has been degreased before beginning to install the end strips.

Use a quality sealant to place the end strips in their proper position. When surfaces are dry, use silicone sealant (RTV) on the four corners. *If intake motion has been a problem, a thin film of anti-seize on top of the cork rubber end strip will allow movement yet continue to seal.*

If RTV is to be used to seal the ends, place a continuous bead across the engine, then install the intake manifold. Be sure to wait for the RTV to completely cure to avoid leakage problems.

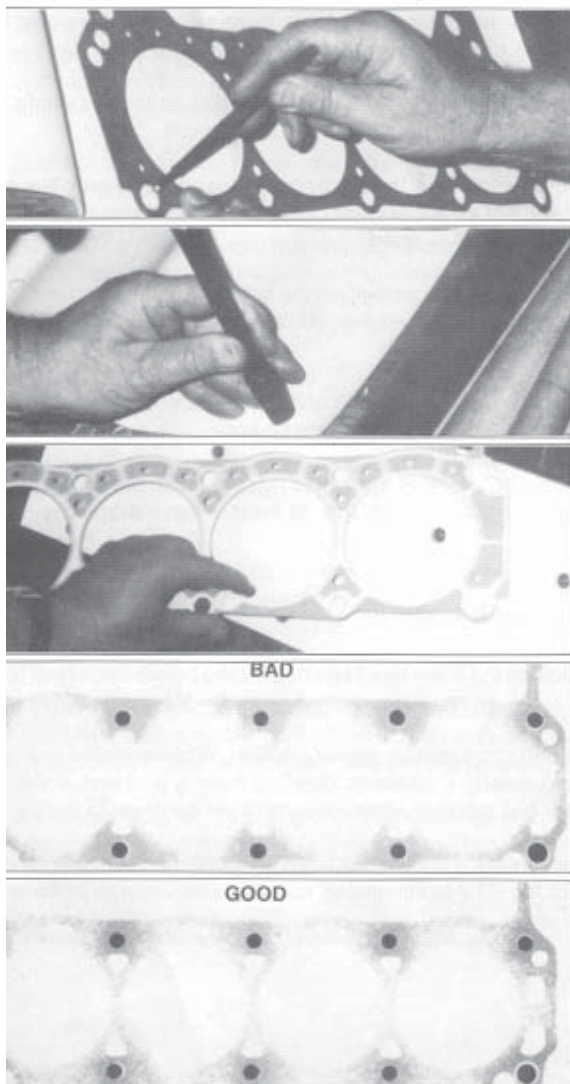

Performance Gaskets

Carbonless Impression Paper

(Order Part No. JV311 (2 sheets) or JV312 (12 sheets))

There is an easy and accurate method to check the flatness of mating surfaces sealed by gaskets - carbonless impression paper. This method is particularly useful for checking the flatness of the cylinder head and block where the sealing is critical. The maximum allowable out-of-flat is .002" per 6" span and approximately .004" overall. Since the total paper thickness is .006", lack of a clear impression indicates warpage.

Directions: Do Not Separate The Two Papers

The paper is pre-cut but may be trimmed to size slightly larger than the gasket.

Punch out all bolt holes and dowel locations using the tools found in Punch Set TK950.

Install the bolts and torque the assembly in the proper sequence and torque specifications.

Wait five (5) minutes.

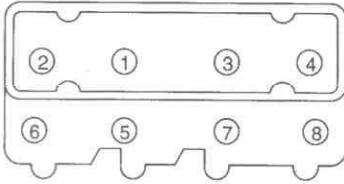

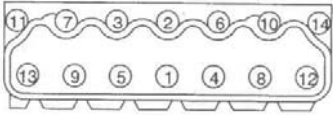

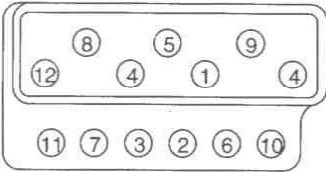

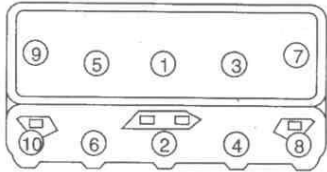

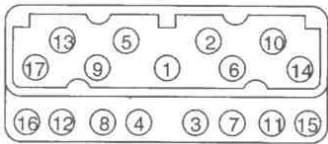

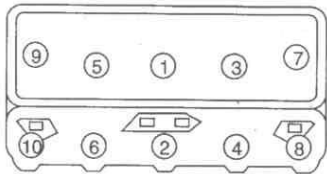

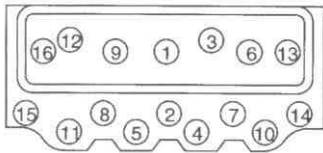

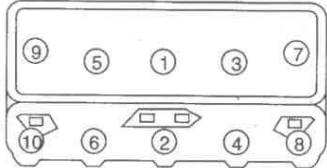

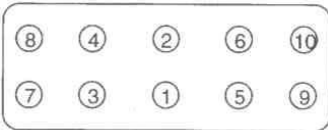

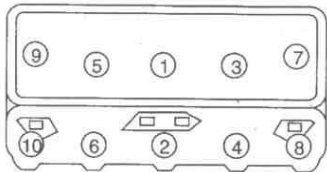

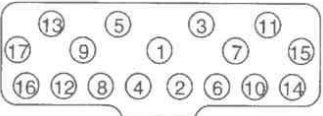

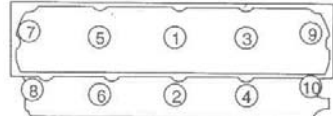

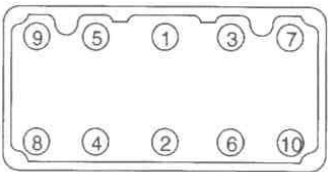

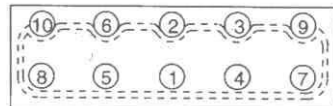

Disassemble using reverse sequence.

If the surfaces are true, a clear impression of the sealing surface will be visible. Little or no impression indicates warpage.

NOTE: Do not use this paper on engines with liners that protrude above the block.

Head Set	1965-1969		(Exhaust Pipe Gasket Not Included, Contains Beaded Steel Cylinder Head Gasket) <i>Beaded Steel</i>	HS1178BJ	1
			(Exhaust Pipe Gasket Not Included)	HS1178VJ	1
Full Set	1965-1969		(Exhaust Pipe Gasket Not Included, Contains Beaded Steel Cylinder Head Gasket) <i>Beaded Steel</i>	FS1178BJ	1
			(Exhaust Pipe Gasket Not Included)	FS1178VJ	1
Cylinder Head Gasket	1965-1969		<i>Beaded Steel</i>	1178BS	2
			Contoured Combustion Chamber <i>Nitroseal, 4.160" Combustion Chamber Opening</i>	1178SG	2
			<i>VR2000</i>	1178VC	2
			Cylindrical Combustion Chamber <i>Nitroseal</i>	3432SG	2
		Contoured Combustion Chamber <i>Nitroseal, 4.100" Combustion Chamber Opening</i>	54052	2	
Cyl. Head Bolt Set	1965-1969			GS33285	2
Valve Cover Set	1965-1969		<i>Cork Rubber</i>	VS38110	1
			<i>High Temperature Cork Rubber</i>	VS38110HA	1
			<i>High Temperature Tuff-Cork</i>	VS38110HTC	1
			<i>Victo-Tech</i>	VS38110R	1
			<i>Tuff-Cork</i>	VS38110TC	1
Valve Stem Seal, Exh.	1965-1969		(O-Ring Type)	B45229	8
			<i>Nitroseal</i>	B45264	8
			(High Temperature)	B45779	8
Valve Stem Seal, Int.	1965-1969		(O-Ring Type)	B45229	8

9 327 CID (5.4L) Chevrolet V8 Cyl, 4.000in./101.6mm (1965-1969) **9**

ENGINE GASKETS (cont.)					
Cylinder Head Gasket (cont.)	1962-1969		(Cylindrical Combustion Chamber Openings, Gasket Has Steam Holes Required For Street Operation) <i>Stainless Steel, 8.8cc Combustion Chamber Volume, 4.190" Combustion Chamber Opening, .040" Compressed Operating Thickness</i>	3512	2
			Contoured Combustion Chamber <i>Nitroseal, 4.100" Combustion Chamber Opening</i>	54052	2
Cyl. Head Bolt Set	1962-1969			GS33285	2
Valve Cover Set	1962-1969		<i>Cork Rubber</i>	VS38110	1
			<i>High Temperature Cork Rubber</i>	VS38110HA	1
			<i>High Temperature Tuff-Cork</i>	VS38110HTC	1
			<i>Victo-Tech</i>	VS38110R	1
			<i>Tuff-Cork</i>	VS38110TC	1
Valve Stem Seal, Exh.	1962-1969		(O-Ring Type)	B45229	8
			(Shedder Type)	B45264	8
			(High Temperature)	B45779	8
Valve Stem Seal, Int.	1963-1969		(Positive Type) <i>Fluoroelastomer</i>	B45418	8
	1962-1969		(O-Ring Type)	B45229	8
Manifold Set, Exhaust	1962-1969			MS7110X	1
Manifold Set, Intake	1962-1969			MS15315	1
Oil Pan Set	1962-1969		<i>Cork Rubber</i>	OS30568X	1
			<i>Tuff-Cork</i>	OS30568XTC	1
Rear Main Seal Set	1962-1969		(Lip Relocator Type)	JV1627	1
Timing Cover Set	1962-1969		(Repair Sleeve Not Included)	JV779	1
			(Contains Repair Sleeve)	JV919	1
Timing Cover Gasket	1962-1969			T27781	1
Timing Cover Seal	1962-1969		<i>3/8" Wide</i>	49328	1
			(Lip Relocator Type) <i>1/2" Wide</i>	65022	1
Harmonic Balancer Repair Sleeve	1962-1969		<i>Ground Steel, .020" Thickness</i>	66597RS	1
			Use With Part Number A504 <i>Nickel Plated Formed Steel, .013" Thickness</i>	A228	1

Cylinder Head Gasket (cont.)	1987		300ZX, Thru 3/87	<i>Nitroseal</i> 5758	2
			300ZX, From 4/87	<i>Nitroseal</i> 5826	2
	1984-1986		300ZX	<i>Nitroseal</i> 5758	2
Cyl. Head Spacer Shim	1988-1989		300ZX, Requires Sealing Compound	<i>Steel</i> 5826S	1
	1987		300ZX, Requires Sealing Compound, Thru 3/87	<i>Steel</i> 5758S	1
			300ZX, From 4/87, Requires Sealing Compound	<i>Steel</i> 5826S	1
1984-1986		300ZX, Requires Sealing Compound	<i>Steel</i> 5758S	1	
Sealing Compound	1984-1989		(4 Ounce Brush Top Can)	JV66B	1
			(12 Ounce Spray Can)	JV66S	1
Valve Cover Set	1984-1989		300ZX	<i>Victo-Tech</i> VS38376	1
Manifold Set, Exhaust	1984-1989		300ZX	MS15363	1
Manifold Set, Intake	1984-1989		300ZX, (Contains Plenum Chamber Gasket)	MS15362W	1
Plenum Chamber Gasket	1984-1989		300ZX	MS15494	1
Oil Pan Set	1987		300ZX, Thru 4/87, (Requires Timing Cover Set)	<i>Victo-Tech</i> OS30606	1
	1984-1986		300ZX, (Requires Timing Cover Set)	<i>Victo-Tech</i> OS30606	1
Rear Main Seal Set	1984-1989		300ZX	JV538	1
Timing Cover Set	1987		300ZX, Thru 4/87, (Requires RTV, Contains Camshaft Seal)	JV1004	1
	1984-1986		300ZX, (Requires RTV, Contains Camshaft Seal)	JV1004	1
Timing Cover Seal	1984-1989		300ZX	66881	1

MISCELLANEOUS GASKETS

Camshaft Seal	1984-1989		300ZX	66864	2
Dist. Mounting Gasket	1984-1989		300ZX	72212	1
Exhaust Pipe Gasket	1984-1989		300ZX, (Flange Type), Pipe To Manifold	F12301	1
Oil Pump Inlet Tube	1984-1989		300ZX	B45693	1
Oil Pump Mounting Gasket	1984-1989			H45692	1
Therm. Housing Gasket	1988-1989		300ZX, Original Equipment Uses RTV	<i>Silicone</i> JV6	1
	1987		300ZX, Thru 2/87	C24212	1
			300ZX, From 3/87, Original Equipment Uses RTV	<i>Silicone</i> JV6	1
1984-1986		300ZX	C24212	1	
Throttle Body Gasket	1984-1989		300ZX	G30801	1
Turbo Gasket Set	1984-1985		300ZX	GS27691	1
Water Outlet Gasket	1987		300ZX, Thru 4/87	C24211	1
	1984-1986		300ZX	C24211	1
Water Pump Mount Gasket	1984-1989		300ZX	K27661	1

Identification Charts For Axle Shaft Gaskets

This chart is arranged by the number of bolt holes, then in size sequence by diameter. For those applications that are different

than the typical axle shaft gasket as illustrated to the left, special illustrations have been provided for visual identification. (See following page for illustrations.)

The proper gaskets can be determined by counting the number of bolt holes or studs, measuring the inside diameter, outside diameter, bolt hole circle and measuring the bolt hole or stud. Read down the columns until correct size is located. The proper gasket number will be found on the same line in the adjoining column.

Note: Gaskets without bolt holes are generally used on oil bath hub cap applications. Some materials have a natural tendency to shrink or distort. This should be taken into consideration when measuring. Caution should be exercised to match the material and thickness being replaced.

"A"	"B"	"C"	"D"	Part Number	Remarks	"A"	"B"	"C"	"D"	Part Number	Remarks
NO BOLT HOLES						SIX BOLT HOLES - Continued

Ford Transmission Identification

All Ford vehicles have a Vehicle Certification Label located on the driver's door or post frame. Refer to the code stamped in the space marked

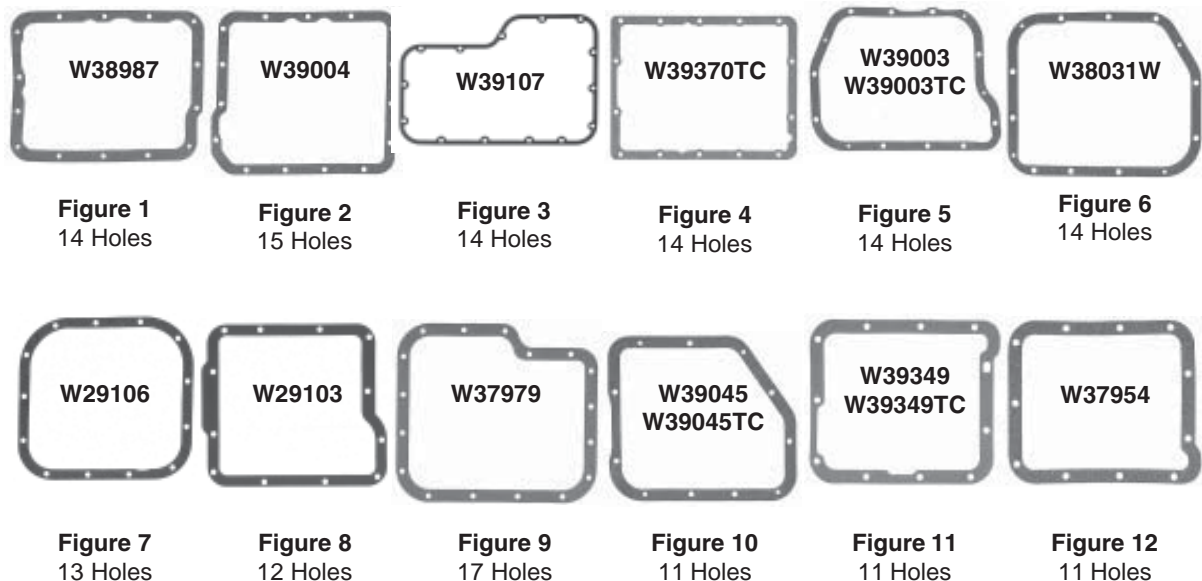

"TRANS" and use this chart to identify the transmission.

"TRANS" CODE	YEAR	TRANSMISSION	"TRANS" CODE	YEAR	TRANSMISSION
4	1966	C-6	S	1977-80	JATCO
4	1963-65	AUTO DUAL RANGE	T	1980-85	AUTOMATIC
6	1966	C-4	U	1966-80	C-6

Ford Transmission Identification

All Ford vehicles have a **Vehicle Certification Label** located on the driver's door or post frame. Refer to the code stamped in the space marked

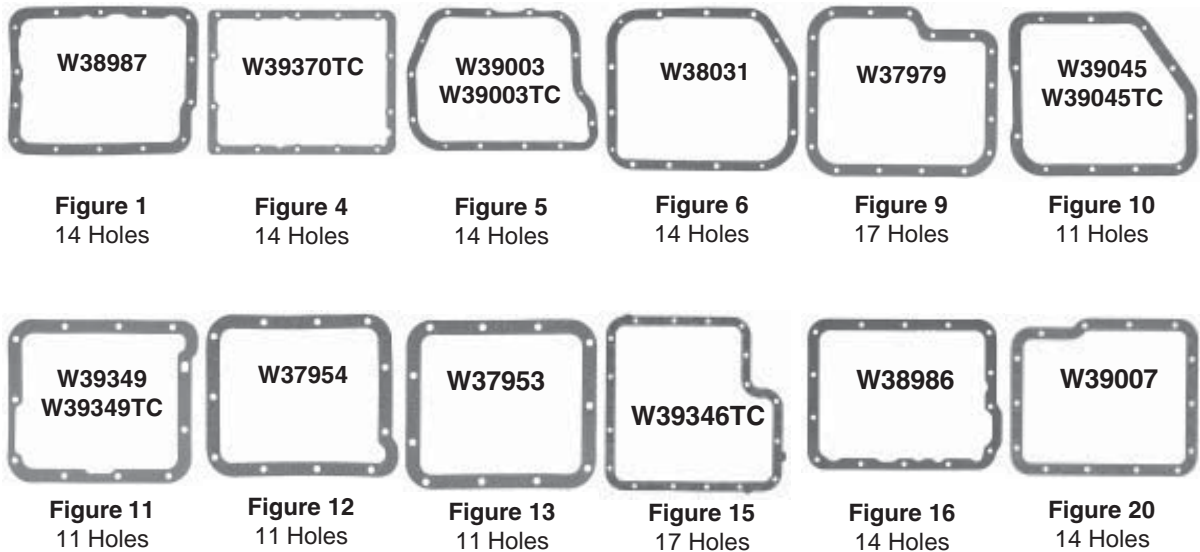

"TRANS" and use this chart to identify the transmission.

"TRANS" CODE	YEAR	TRANSMISSION	"TRANS" CODE	YEAR	TRANSMISSION
4	1966	C-6	S	1977-80	JATCO
4	1963-65	AUTO DUAL RANGE	T	1980-85	AUTOMATIC
6	1966	C-4	U	1966-80	C-6
6	1963-65	C-4 DUAL RANGE	V	1974-85	C-3

Harmonic Balancer and Crankshaft Oil Seal Groove Repair Sleeves

1. No need to weld and regrind worn seal surface area.
2. Maximum 0.013" thick sleeve accommodates dual lip oil seals and standard seal lip diameters.
3. 0.0003" - 0.0009" nickel plating protects against corrosion and adds strength for ease of installation.
4. Steel stamped sleeve is swedged on one end for strength and flared on the other end for ease of installation.
5. 0.002" press-fit fixes the sleeve firmly on the shaft.

The 66000RS-Series are .020" thick ground steel. The "A" Series are .013" nickel plated formed steel. An interchange from the ground steel to formed steel version is listed for your convenience.

Both the harmonic balancer and the crankshaft repair sleeve can be installed using a soft block of wood to absorb the impact of hammer blows. A circular hose in the wooden block is required to accommodate the protrusion on the crankshaft flange which centers the flywheel.

Interchange

The following interchanges GS cylinder head bolt gasket part numbers to the corresponding 216 cylinder head bolt engine part numbers and vice versa.

TK-950 11-Piece Gasket Hole Punch Set

This set is designed to cut holes and internal radii in gaskets and other soft material such as rubber, lead foil, linoleum, felt fiber and other similar materials. Not suited for metal.

Set contains 5-3/8" long drive mandrel.

Ten punches sized:

1/4"	9/16"
5/16"	5/8"
3/8"	3/4"
7/16"	7/8"
1/2"	1"

TK950 11-Piece Gasket Hole Punch Set

Packed in an attractive molded plastic storage box for protection and easy use.

Gasket Materials

JV6 Bead-N-Seal® Silicone Gasketing (Aluminum)

JV6 is a high temperature resistant, low volatile RTV-gasket material developed specifically for use on engines. It meets the low volatility specifications required of engines equipped with oxygen sensors. The temperature rating for JV6 is -75° to 500° intermittent service. JV6 can be used as a supplement to conventional gaskets, such as oil pan and manifold end seals. Or it can be used as a replacement for most paper type gaskets, such as timing cover and water outlet. It's aluminum color more closely matches today's engine components while providing higher temperature capabilities. JV6 comes in an 80ml syringe style applicator which is packaged in a blister pack for display in retail sales area.

JV66B and JV66S Perfect Seal Sealing Compound

Perfect Seal is available in a 4 oz. brush top can and a 12 oz. spray can. It is recommended as a sealing aid on all steel faced gaskets and cylinder head shims. Perfect Seal is a non-hardening sealer which re-

mains flexible from -30° to +400°F. It helps prevent oil, water, gasoline and vacuum leaks. JV66B and JV66S can also be used as a sealing supplement on bolts, studs and threaded fittings.

Bulk Material

CORAMIC 29®

Coramic 29® is an organically treated facing material mechanically clinched to both sides of a perforated steel core. It has good resistance to oil and gasoline. Applications include exhaust manifold, carburetor and turbocharger gaskets.

FLAT PACKED (One Sheet Per Package)

JV222	1/16" x 10-1/4" x 36"
JV224	1/16" x 24" x 36"

*

CORAMIC 129®

Coramic 129® is the same as Coramic 29® except the facing material is only on one side of the perforated steel core.

FLAT PACKED (One Sheet Per Package)

JV225	1/16" x 12" x 28-1/2"
--------------	-----------------------

*

VICTOCOR®

Victocor® is a hard gasket material composed of a fibrous based sheet with a nitrile binder mechanically clinched to both sides of a perforated steel core. It is resistant to oil, gasoline, water and antifreeze solutions. It's most common usage is as a head gasket and intake manifold gasket material.

FLAT PACKED (One Sheet Per Packaged)

JV222VC	1/16" x 10-1/4" x 36"
----------------	-----------------------

*

NITROSEAL®

Nitroseal® is a pure non-oxidizing graphite facing material on a pierced steel core designed specifically for use on exhaust applications. It has a temperature rating of 1300°F in the clamped state.

FLAT PACKED (One Sheet Per Package)

JV222SG	1/32" x 10-1/4" x 36"
JV313SG	3/64" x 10-1/4" x 36"
JV314SG	1/16" x 10-1/4" x 36"
JV315SG	3/64" x 20" x 40"
JV316SG	1/16" x 20" x 40"

JV301TC	3/32" x 18" x 36"

*

CARBONLESS IMPRESSION PAPER

There is an easy and accurate method to check the flatness of mating surfaces sealed by gaskets - carbonless impression paper. This method is particularly useful for checking the flatness of the cylinder head and block where the sealing is critical.

JV311 (Two Sheets)	10" x 30" Sheet
JV312 (Twelve Sheets)	10" x 30" Sheet

Assortments

“SINGLE PREFIX” Jobber Stocking Assortments

MA51EV, MA52EV and **FR25B** are intended to aid in the initial stocking and replenishment of miscellaneous “single prefix” gaskets. These assortments contain 20% of the single prefix part numbers, all of which have nationwide usage.

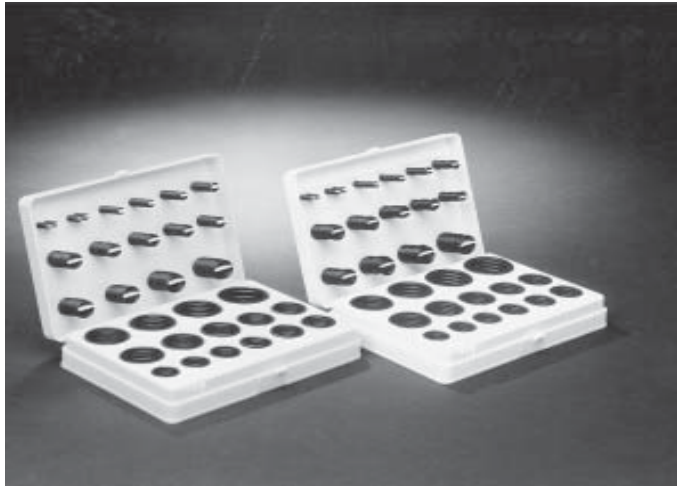

MA51EV contains water outlet “C”, fuel pump “D”, exhaust flange “F”, carburetor “G”, axle flange “J”, water pump “K” and differential “P” series gaskets (210 part numbers).

MA52EV contains valve stem seals “B” and automatic transmission pan gaskets “W” series (70 part numbers).

FR25B contains exhaust packing ring “donut” gaskets “F” series (25 part numbers).

These three assortments will give breadth to your inventory.

“O” Ring Assortments

Each assortment contains the 30 most popular “O” rings in a sturdy plastic case. Detailed dimension information is attached to each one. Durable “O” ring material is made to be compatible with petroleum base lubricants, hydraulic oil, gasoline alcohol, LP gas and water. Available in standard and metric size assortments.

“O” Ring Sealing Fluid Check

The chemicals in many fluids used in industry can have a harmful effect upon the synthetic compound in an “O” Ring. To guide you in the use of “O” Rings, check the type of fluid you will be sealing against this list.

May Be Used To Seal	Should Not Be Used To Seal
<ul style="list-style-type: none"> • Acetylene • Air Oxygen • Alcohols - Methyl and Ethyl • All Inert Gases • Ammonia Gas • Chemical Salt Solutions • Coolant Fluids, Ethylene Glycols • Diesel Fuels • Diesel Lubrication Oils • Formaldehyde • Freon 12, 14 • Gases • Gasolines up to 30% Aromatic Content • Glucose • Glycerol • Greases • Linseed Oil • L. P. Gas • Mild Acids • Mild Alkalies 	<ul style="list-style-type: none"> • Petroleum Hydraulic Fluids • Petroleum Lubricating Fluids • Soap and Detergent Solutions • Turpentine • Acids over 10% Concentration • Castor Oil Base Automotive Brake Fluids • Chlorinated Solvents • E. P. Lubricants containing additives which liberate free sulfur or chlorine (Use with caution) • Furfural • Lacquers • Nitric Acid (Any concentrations) • Organic Ester Base Fluids • Pydraul • Skydrol

Stocking and Merchandising Aids

MA54F Small Gasket Service Center

- Easy to stock - Easy to use.
- Stocks all your small gasket needs.
- Extra-heavy duty construction.
- P & W series gaskets can be stocked in the easy to use rack on the bottom shelf.
- Drawers are mounted on rollers (with stops) for your convenience.
- Stock control cards not included. Order **MA54FIC** for stock control cards.

Order **MA51EV**, **MA52EV** and **FR25B** stocking assortments for complete breadth of stock. Order the "Top-Ten" assortments for added depth of inventory.

MA10 Dispenser For 18" Victolex® Rolls

This assortment contains the three most popular Victolex® roll thickness and a wire display/dispensing rack with color header. Victolex® is a general purpose sheet cellulose fiber gasket material recommended for use where temperatures do not exceed 300° F.

Rolls are also available separately for replenishing stock:

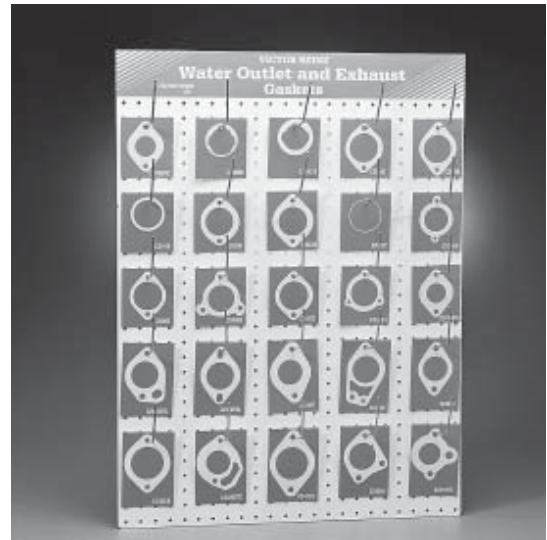

JV11F	1/64" x 18" x 30 feet
JV12F	1/32" x 18" x 30 feet
JV13F	1/16" x 18" x 10 feet

Stocking and Merchandising Aids

MA147P Dealer Assortment Board

Consists of pegboard, hooks and decal sheets listing for all exhaust pipe and water outlet gaskets for both domestic and imported vehicles. Order Silhouette separately (*See below*).

MA147SE MA147SW MA147BL Silhouette For Dealer Assortment Board

Order **MA147SE** for exhaust pipe gasket silhouettes and **MA147SW** for water outlet gasket silhouettes. Order **MA147BL** for blank cards (10 per package).

JV-1 Handi-Pak®

The Handi-Pak® is an assortment of cork/rubber, Victolex® and Victopac® gasket materials in small, easy-to-use sheets. It's perfect for homeowners' DIY projects or for small repair jobs in auto shops.

Stocking and Merchandising Aids

Jobber Stocking Boxes

These sturdy, white corrugated display/stocking boxes are made to organize small gaskets on stockroom shelves or in retail displays. The chart below will help you determine the sizes you need.

Part No.	Size (Inches)	Series
BX1	5-1/2h x 6-1/8w x 12d	B, C and D
BX2	7-1/2h x 7-1/2w x 12d	F, G and H
BX3	9-3/4h x 10w x 12d	J, K and L
BX4	14-3/4h x 14-1/2w x 12d	P,T and W

Jobber Stocking Envelopes

Ploy bags and Insert Cars (EN1, EN2 and EN3) or Envelopes (EN4). Ideal for repackaging gaskets to freshen stock.

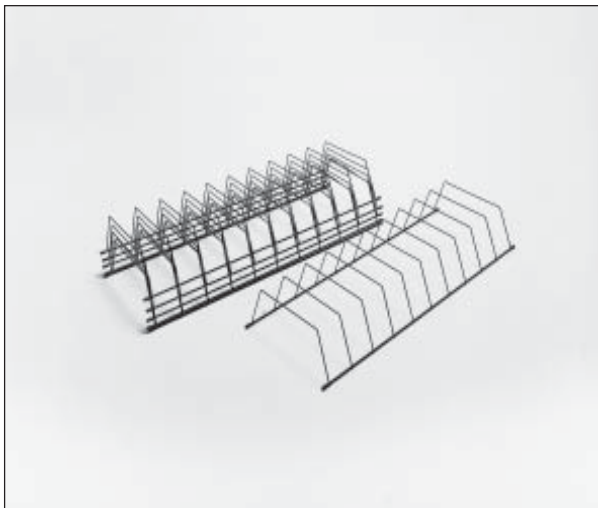

Part Series	No.	Size (Inches)	Qty.
EN1	4-1/2" x 6-3/4"	20	B, C and D
EN2	7" x 8"	20	F, G and H
EN3	9" x 10-1/2"	10	J, K and L
EN4	14-3/4" x 17-7/8"	5	N, P, T and W

MA159 Wire Stocking Rack

Perfect for stocking larger flat gaskets like valve cover, manifold and head gaskets. Organize your inventory, maximize space and keep popular stock numbers in an easy-to-access file system. Consists of five enameled wire racks. (Color: Gray)

Dimensions: 5"h x 12 1/8"w x 46" l
